## Rank/Discipline

Assistant Professor  
Medicinal Chemistry  
Department of Pharmaceutical Sciences

## Education & Specialty Certification

PhD, University of Puerto Rico, 2006.  
Post-doc, UPR-Medical Sciences, 2008.

School of Pharmacy  
Medical Sciences Campus  
University of Puerto Rico

## Eliud Hernández O'Farrill, Ph.D.

### Research Areas and Active Projects

Design and synthesis of bioactive molecules as anti-invasive breast cancer compounds via docking calculations and medicinal chemistry methodology. In our laboratory, we are currently working in two different projects:

#### **Small molecule inhibitors of Rac1 as anti-invasive breast cancer compounds**

We are interested in the synthesis of small molecule inhibitors of Rac1 as anti-invasive breast cancer compounds. Rho family GTPases are molecular switches that control signaling pathways regulating a myriad of cellular functions. Rac1, a Rho family member, plays a critical role in several aspects of tumorigenesis, cancer progression, and has been associated with the increased proliferation and invasion of several breast cancer cell lines. Since the activation of Rho GTPases is controlled by guanine nucleotide exchange factors (GEFs), inhibition of the interaction of Rac with its GEFs is a targeted strategy for blocking Rac activation. In this research, we used an existing Rac inhibitor NSC23766 to design and develop improved derivatives. We identified EHopp-016 as a Rac inhibitor, with 100-fold more potency than NSC23766, which binds to Rac1 with tighter interaction. The compound EHopp-016 is an effective tool for probing Rac function in different cell lines.

#### **Drug discovery of N-WASP inhibitors in metastatic breast cancer cell lines**

The Wiskott-Aldrich syndrome protein (WASP) family proteins are important regulators of actin polymerization and invadopodia formation. The neural-WASP (N-WASP) is a central regulator of Arp2/3 complex-mediated actin polymerization into invadopodia to initiate cell migration, and thus, cancer metastasis. N-WASP is activated at the cell membrane during invadopodia initiation, thus, implicating N-WASP in the initiation of cell invasion. In this project we are interested in the design and synthesis of small-molecule inhibitors of N-WASP. The new compounds are designed based on

the available structures of known N-WASP inhibitors, visual inspection and docking software. Also, in this project we use virtual screening and docking to identify new molecules with potential to interact and inhibit N-WASP activity in metastatic breast cancer cells.

## Collaborators

**Dr. Suranganie Dharmawardhane** - Department of Biochemistry, School of Medicine, University of Puerto Rico Medical Sciences Campus

**Dr. Cornelis P. Vlaar** - Department of Pharmaceutical Sciences, School of Pharmacy, University of Puerto Rico Medical Sciences Campus

**Dr. Peter Crooks** – University of Arkansas Medical Sciences, Department of Pharmaceutical Sciences
